Supporting Landholder Capacity for Quality Agricultural Development Applications across Northern Australia

Project ID AHT.7.2021025

Supporting Landholders in Development

The CRCNA papers in Northern Territory and Western Australia entitled *De-risking, brokering and prioritising agricultural development*, and the Northern Queensland, *Facilitating Quality Agricultural development*. All three papers identified and explored barriers to agricultural development across Northern Australia.

NT Farmers delivered the project *Supporting Landholder Capacity for Quality Agricultural Development Applications across Northern Australia*. This project evaluated the following question: "What are the capacity development needs and products needed to lift the ability of landholders, industry bodies and development services to be development/investment-ready across northern Australia?".

Out of the evaluation, one requests from industry was to create a simple user guide of 'Queensland GLOBE' to help potential farmers/developers access map layers to help identify vegetation management status, cultural heritage status, watercourse identification, not to mention the platform can also help identify land valuations and mining tenements. Queensland Globe is a free, online interactive tool developed by the Queensland Government that allows users to explore spatial data, maps, and imagery of Queensland.

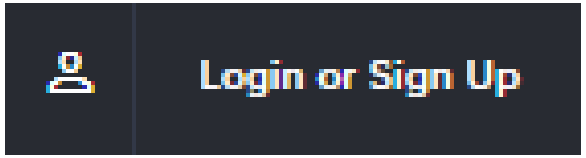

Queensland Globe has an extensive layer catalogue which can be found on the home page www.qldglobe.information.qld.gov.au

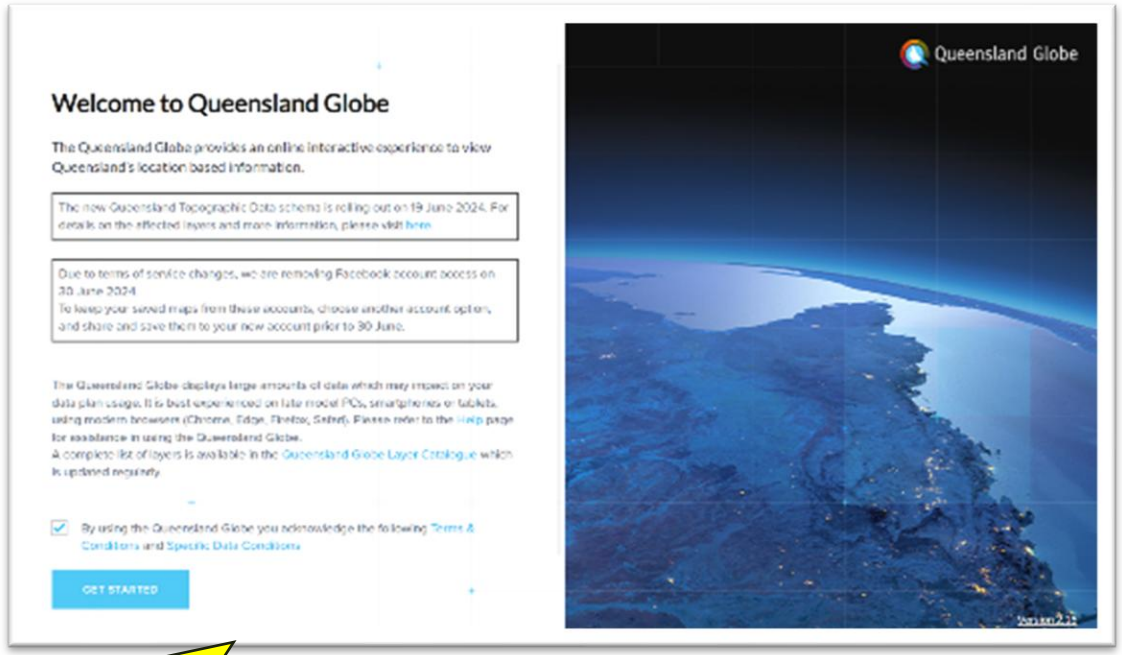

For enquires email opendata@resources.qld.gov.au for video tutorials https://qldglobe.information.qld.gov.au/help-info/tutorial-videos.html

You can request a free vegetation management report or map https://www.qld.gov.au/environment/land/management/vegetation/maps/map-request

TO BEGIN: Open Queensland Globe on your browser.

You must sign in if you want to save or share your maps.
Sign in using an existing log in e.g. a Gmail or Facebook account

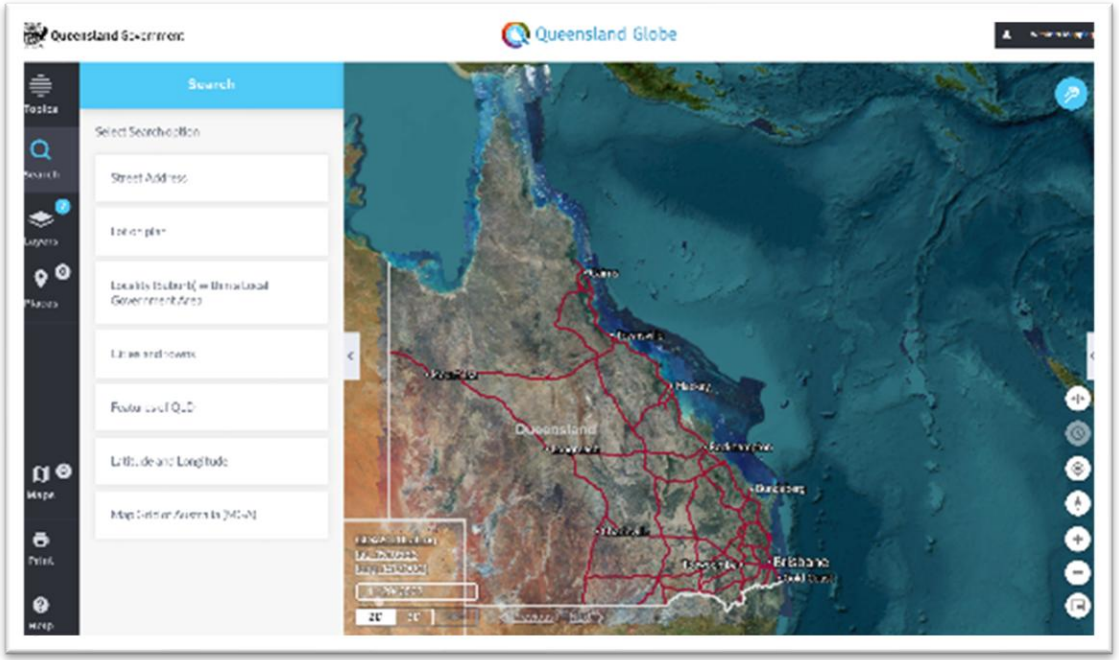

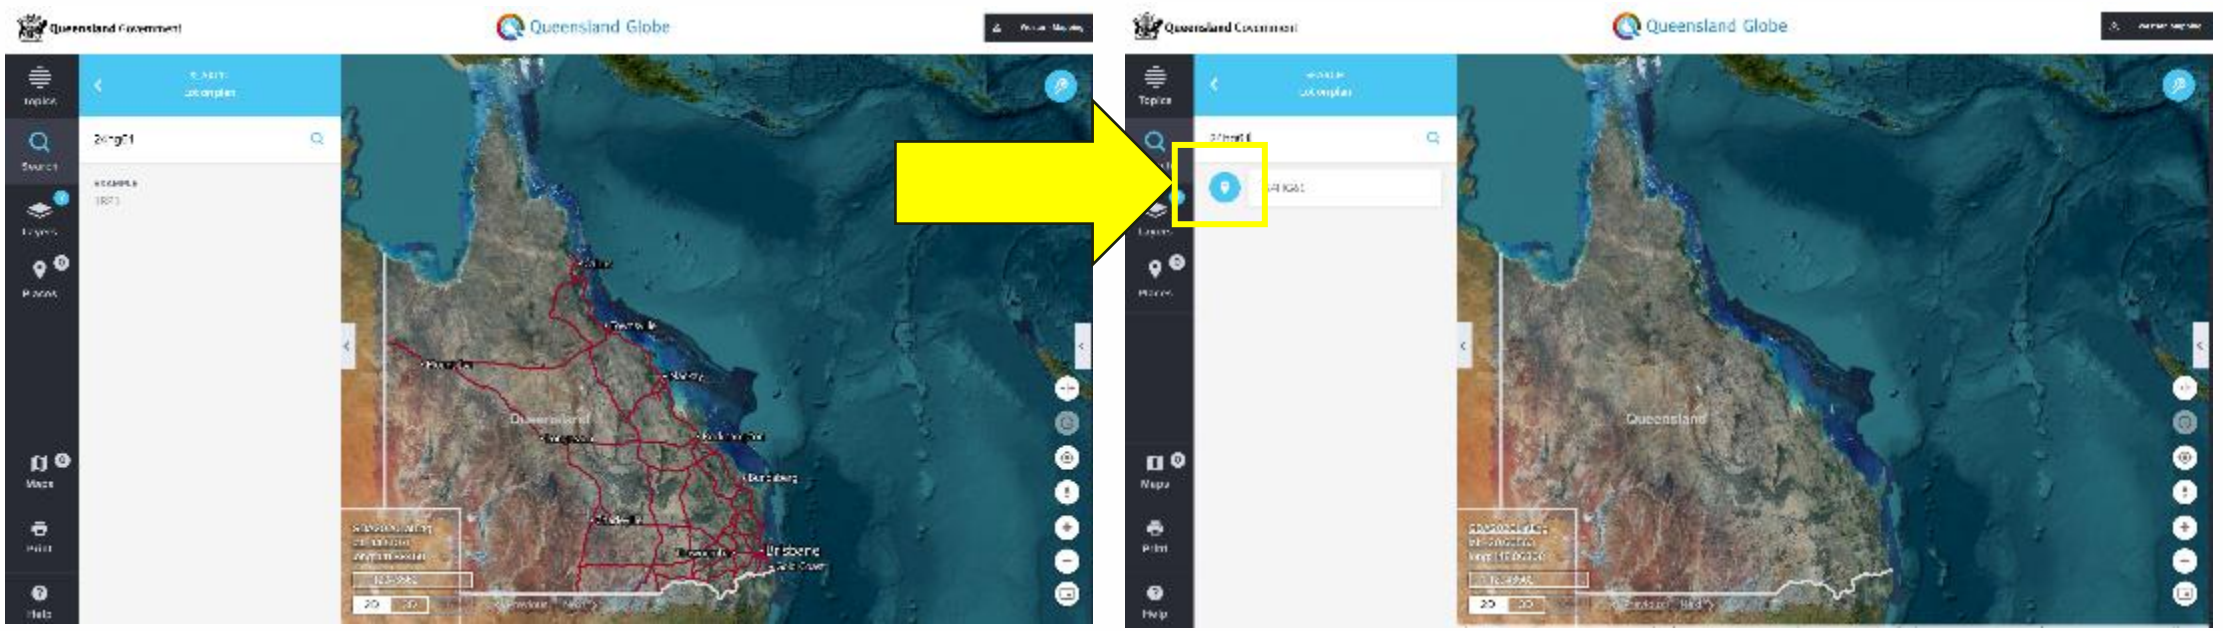

Using the search button, type in your lot and plan number.

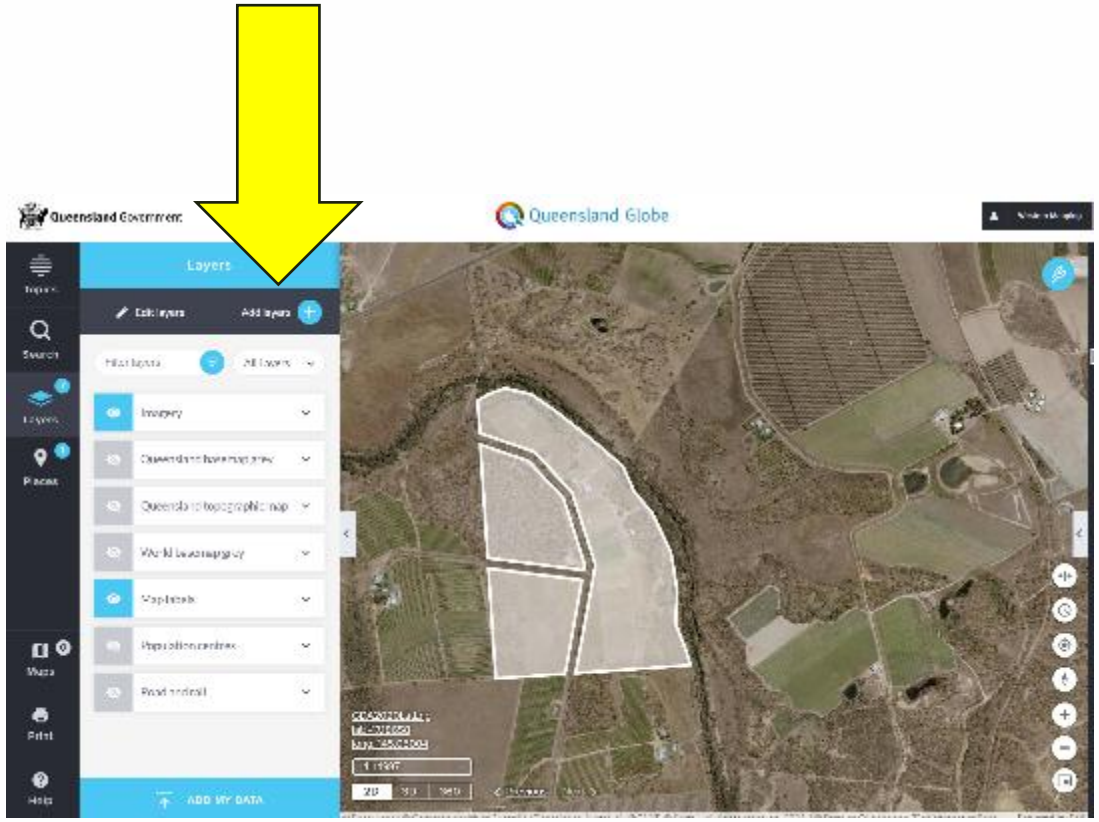

After typing your lot and plan press enter. Then, click ‘Add To Places’

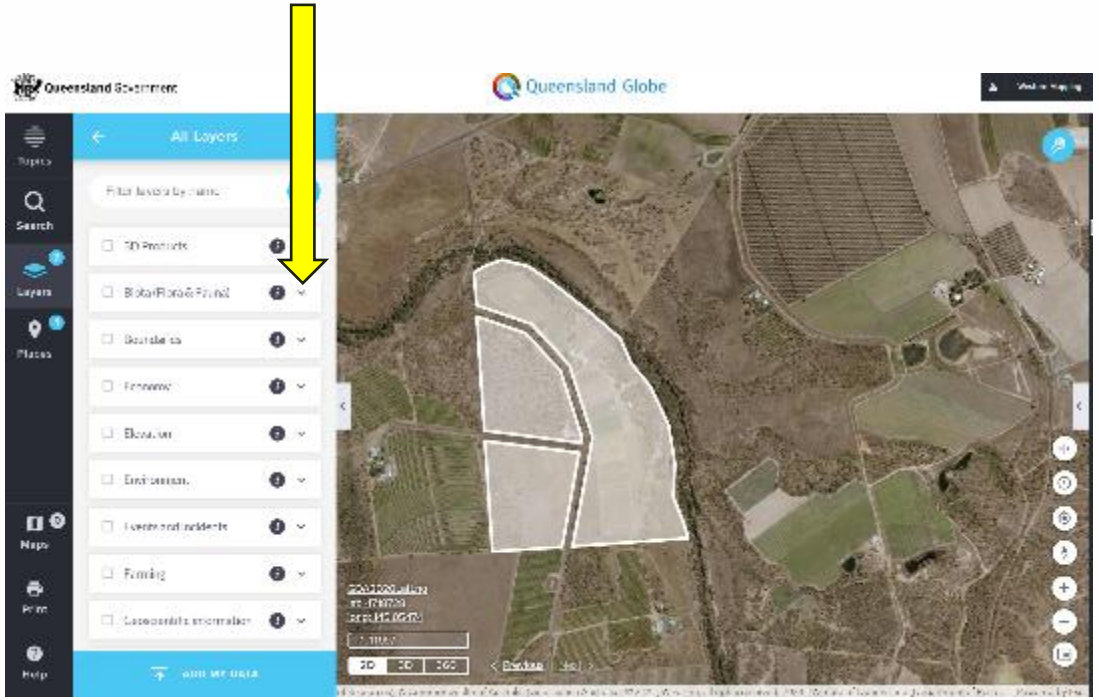

Next, go to the ‘Layers’ tab and click ‘Add Layers’

Leaving the box unticked, click on the drop down for ‘Biota **(Flora & Fauna)**’. Scroll down to the ‘**Vegetation Management Information**’. Then click on the down arrow.

Scroll down to '**Property map of assessable vegetation (PMAV)**'.

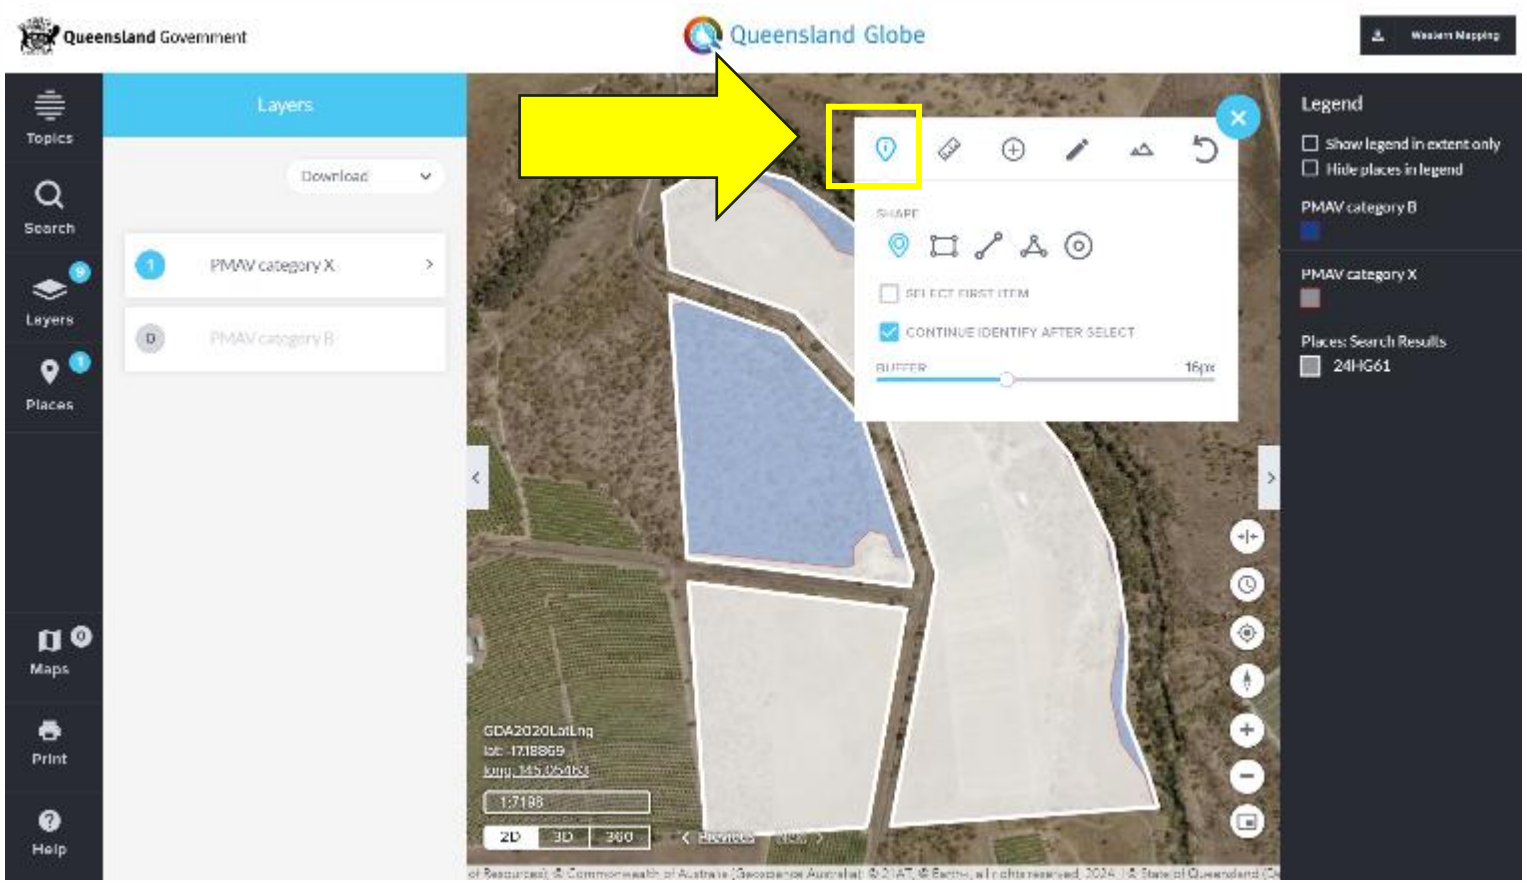

Click on the box labelled 'Property map of assessable vegetation (PMAV) so that all subsequent layers are then activated (blue ticks). You can click on the drop-down to expand the tab and see all PMAV layers.

Click the arrow to the right of the screen to expand the Legend. Then, above, click on the tool icon to open the toolbar.

Once you've opened the Toolbar, click on the **'Identify' button**. The 'identify' button will turn blue. While this is active, hover over your lot and plan area, and click once to highlight. A list will then appear on the lefthand side named '**Layers**'.

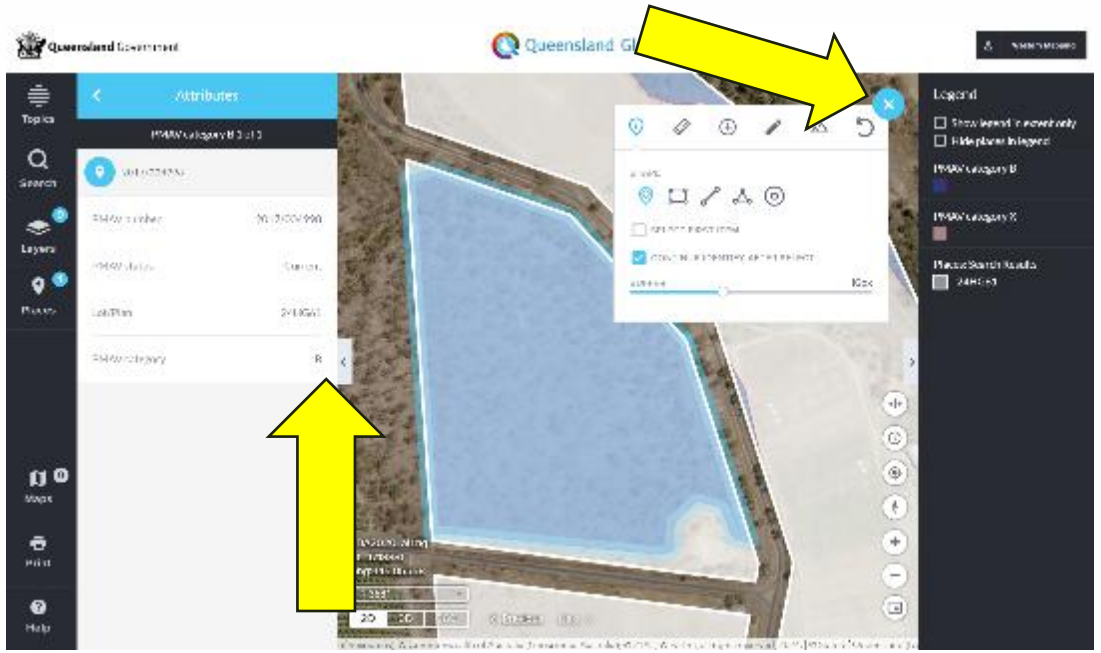

Your PMAV information will show up in the 'Layers' section of the screen, and if you have a PMAV this information will be displayed here including which categories (i.e. 'Category X' or 'Category B').

To find out the status of the PMAV, click on the arrow, and the PMAV number will appear. Click on the arrow again, and it will show the status of the PMAV and confirm the category.

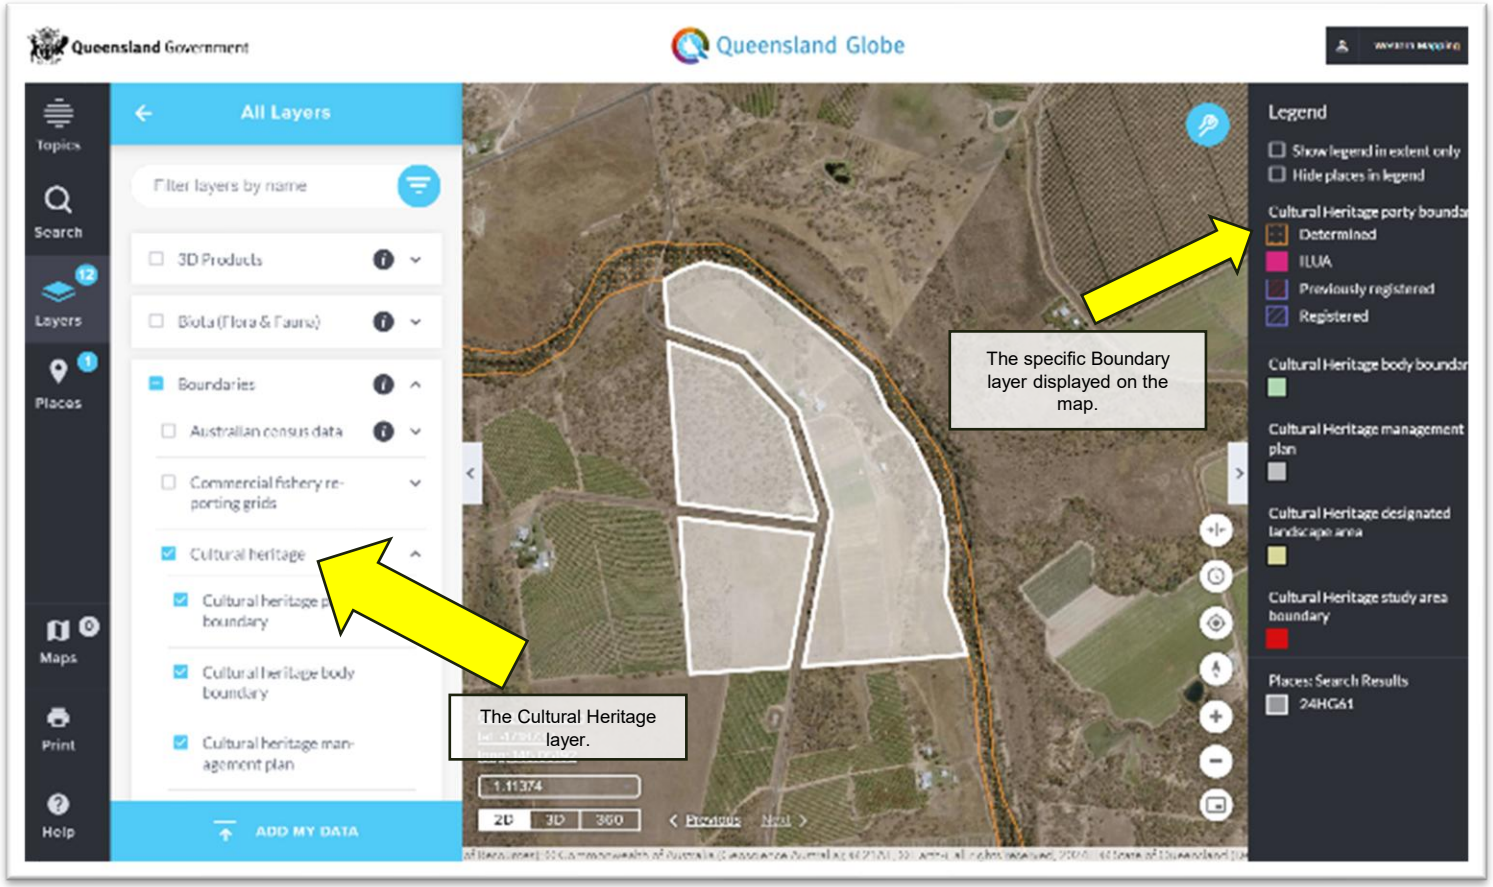

If your lot and plan is in a few parcels you will need to repeat the process. Click on the Blue cross, then again on the **'Identify' button** and then click on the next parcel. The below map shows a different category, which is 'Category B' – meaning remnant (i.e. cannot be cleared).

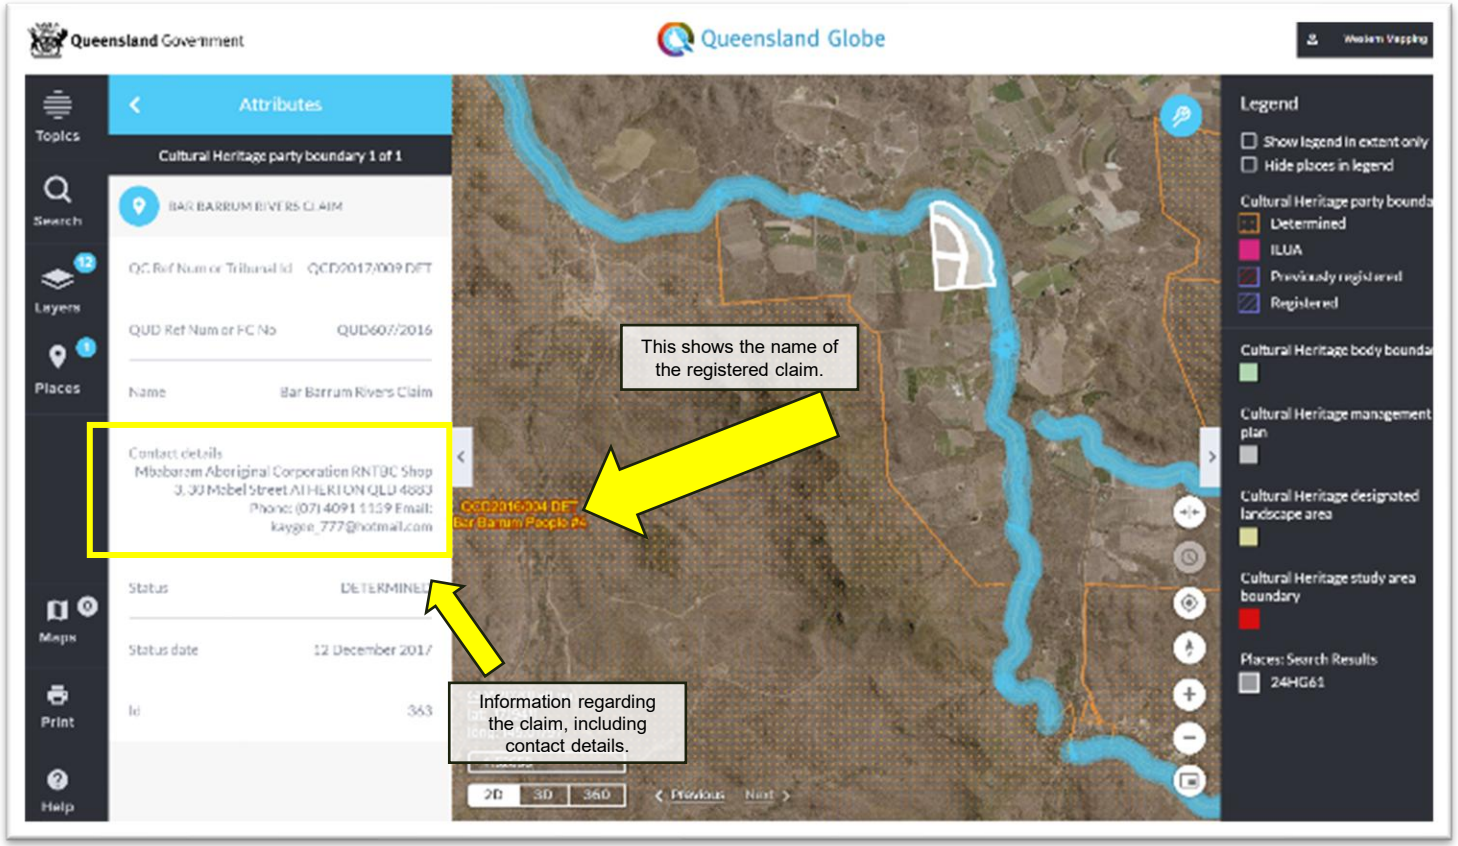

There are many layers you can check using Queensland Globe, for example the '**Cultural Heritage'** layer.

First, click on the **'Layers'** button on the left-hand side of the toolbar. Then, condense all layers and unclick the box for 'Property map of assessable vegetation (PMAV)' so that none of these layers are active.

You can then go back to **‘All Layers’** and use the click-down arrow to open the **‘Boundaries’** layers. Then click on the box next to **‘Cultural Heritage’**. If a new layer become visible on or near your parcel of land, you can go back to the toolbox and click the ‘Identify’ icon, then click on the item you want to source information for.

Follow the prompts (arrows), if you have a registered claim it will appear. The example below shows it’s a ‘Bar Barrum Rivers Claim’. Which can show you information relating to the claim, including contact details.

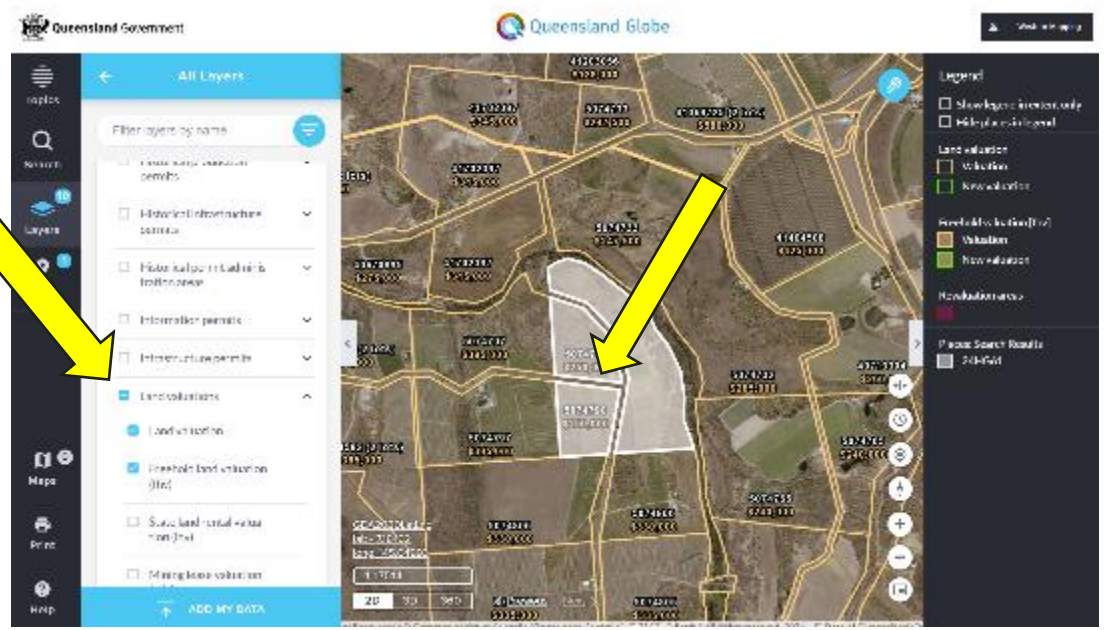

Another very useful layer is that of land valuations. Click on the layer icon on the left-hand side to bring the screen back to the ‘Boundaries’ layer.

Unclick the Boundaries layer box and find the **‘Economy’ layer.** Click on the drop-down arrow and scroll to **‘Land valuations’** and click on the box which will turn blue. The map layer will now show the current valuation as well as neighbouring properties for a comparison.

Don’t forget! If you want to know more detail, click on the spanner and identify icon and then click where you want more information.
